By using the ClimCost application, each user can choose between Rainfall, Minimum, Maximum or Mean temperature and then can select between the 10th, 25th, 50th, 75th or 90th percentile. One of the figures shows the bias of the selected variable generated with the RegCM model and the observation data from E-OBS.

The application was developed for the region of the Balkan Peninsula with a horizontal resolution of 20x20 km and the generated data are for the period January 1975 to December 2004, which can be selected as the start and/or end date for visualization of the selected variable.
